Science, Imagination and Wonder: Robert Grosseteste and His Legacy

Pembroke College, University of Oxford
April 3rd - 6th, 2018

We warmly welcome all delegates attending the Ordered Universe Conference Science, Imagination and Wonder: Robert Grosseteste and his Legacy. The Conference is taking place in association with the International Robert Grosseteste Society, whose partnership the Ordered Universe is privileged to enjoy. We are particularly grateful to our keynote speakers – Professors Jim Al-Khalili, Simon Oliver, Suzanne Akbari, and John Milbank – and to all of our delegates; many of whom have travelled considerable distances.

The Ordered Universe project began in 2010 at Durham University, as a collaboration between sciences and humanities, focused on medieval scientific writings. Moving swiftly to the shorter scientific writings of Robert Grosseteste, the project has steadily expanded in terms of institutional partners, individual participants and in the disciplines that coalesce and convene three or four times a year for collaborative reading and thinking on the texts in question. The current funding programme from the Arts and Humanities Research Council, UK, is held jointly between the universities of Durham and Oxford, with the involvement of the University of Rome, Tor Vergata, Georgetown University, the American University of Beirut, McGill University, Bishop Grosseteste University, Lincoln, the Universities of York, Cambridge, Sunderland, Reading, and Milan.

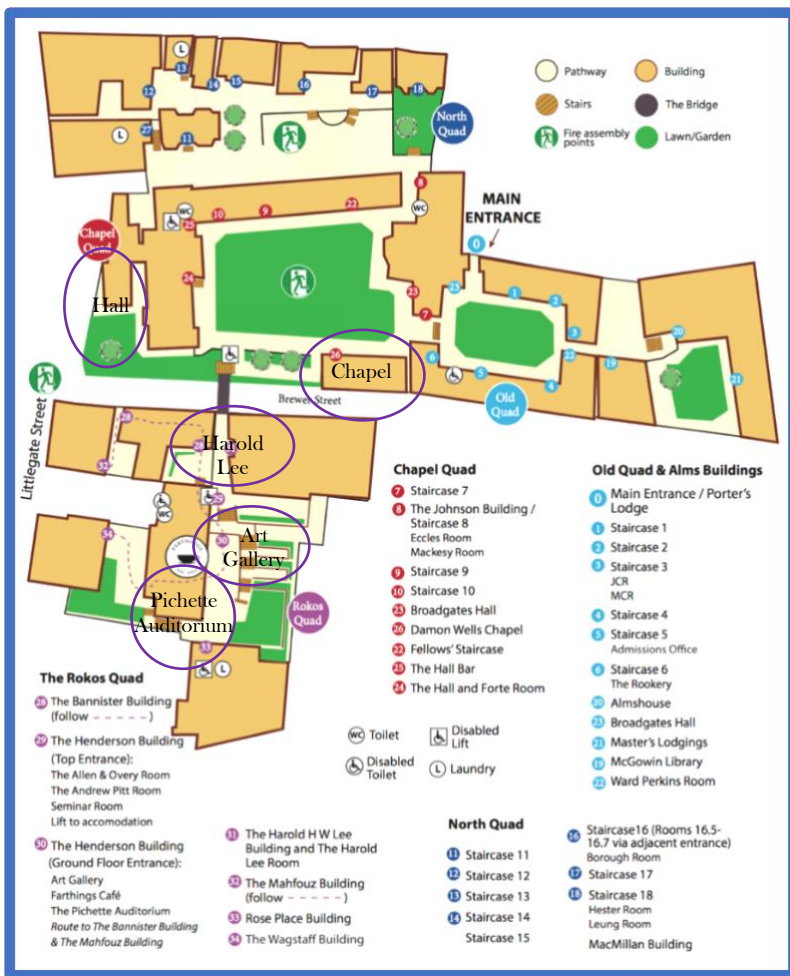

The collaborative reading symposia, twenty so far, are the life-blood of the project; occasions where diverse disciplinary perspectives focus on Grosseteste's work. From this we develop a wide range of further collaboration: edition and translations of the scientific opuscula in a series with Oxford University Press, new scientific ideas published in leading journals, contribution to conferences and seminars across the participating fields, collaboration with artists from glass to film projection, photography and sculpture, spin-out projects in education, twin-PhD projects between arts and humanities, and access to university initiatives, and a long-running commitment to public education through talks, festivals, and interactive exhibitions. Some 167 people from undergraduates to emeriti have engaged directly with the project, academics and non-academics alike, with many more through our outreach activities. For more information see www.ordered-universe.com.

This conference brings together all of the strands that make up the research project and is a major event within the current programme. We are delighted to include an exhibition of work from the National Glass Centre, University of Sunderland, made in response to Grosseteste's scientific works, with a photographic display from Rosie Reed Gold, and photos and an on-site installation from Alexandra Carr. This, in addition to panels that range from the reception of Aristotle, to the historical and social context of the early thirteenth century, Grosseteste and pedagogy, modern psychology of perception, art history, computer modelling, cosmology, interdisciplinarity and so much more, as you will see in the programme.

We are grateful to Pembroke College for hosting the Conference, and in particular, to Alex Cox and the Events Team, for continued support with organisation and planning. During your stay, we encourage you to visit the College Chapel to see the Conference Installation by Alexandra Carr, and the Pembroke Art Gallery to see the Conference Exhibition 'Light Embodied', curated by Clara Chivers, with materials from the College special collections alongside the artwork.

The International Robert Grosseteste Society exists to exchange and publicly disseminate information about Robert Grosseteste. To this end, it arranges international conferences and encourages scholarly publication on Grosseteste. Membership is open to any scholar with an interest in any aspect of Grosseteste's life and work and there are no membership fees. For more information contact Dr John Flood (j.flood@rug.nl).
